

FALL 2019

SUSTAINABLE FUTURES SPEAKER SERIES

Wind Power in Humboldt County - *a panel discussion on the proposed Terra-Gen wind generation project*

NEW DATE: Wednesday, November 6
5:30 - 7:00 pm in Founders Hall 118

The proposed wind farm at the Monument and Bear River ridges could generate about 400 GWh annually, which is equivalent to nearly half of Humboldt County's electricity use. Anticipated project features include a significant contribution to north coast renewable energy generation and to California's clean energy mandate; creation of local green jobs and technical expertise; and Humboldt Bay development. Concerns raised include impacts on bat and bird deaths; tree removal; effects on sites with cultural and ecological significance to Native American Tribes; erosion and sedimentation from sub-river drilling and road expansion; visual impacts; light and noise pollution; and traffic congestion.

This session provides an opportunity to discuss possibilities for wind energy development in Humboldt County, through a panel representing a diverse set of perspectives.

The Sustainable Futures Speaker Series is sponsored by the Schatz Energy Research Center, the Environment & Community graduate program, and the College of Arts, Humanities & Social Sciences at Humboldt State University.
